

## FibreConnect from MLL Telecom

### What is FibreConnect?

MLL Telecom's FibreConnect internet connectivity services provide high bandwidth and premium grade internet connectivity to businesses of all sizes at a competitive price point. Using the latest full fibre Networking technology, symmetric bandwidths can be guaranteed allowing businesses to maximise the impact of their online presence.

*94% of small business owners consider a reliable internet connection critical to the success of their business.*

### What Does FibreConnect Provide?

FibreConnect provides Internet access at speeds of 100Mbps, 500Mbps and 1000Mbps as either a monitored or fully managed service.

FibreConnect provides, as standard, the following features:

- Dedicated Internet Connectivity
- Business-grade router with 4 x RJ45 LAN Ports and optional Wireless LAN access
- MLL's "monitored" service which proactively monitors and manages the availability of the Internet service
- 12 x 5 support from MLL's National Network Operational Centre (NOC). Standard support between 7am to 7pm Monday to Friday (excluding bank holidays).

\* Enhanced support is available for customers with 24x7 requirements. This approach allows our customers the ability to tailor the level of operational support to match their business needs.

### What are the benefits for your business?

#### Ultrafast, symmetrical speeds & super-low latency

With a full-fibre connection directly into your business, you will have access to symmetrical, gigabit-capable upload and download speeds, increasing efficiency and productivity. Unlike so-called 'fibre' broadband services, there is no copper to restrict the internet speeds it can support, meaning practically limitless capacity.

## FibreConnect from MLL Telecom

### No slow-downs, no matter how many people are using the network

Staff across your entire business will be able to simultaneously access a gigabit network at peak times with no drop in speed thanks to the bandwidth capacity of the network. This means that it's possible for everyone to do whatever they need online at the same time with no waiting around for pages to load or content to buffer.

### Next-generation services, cloud computing & remote back up

A full-fibre connection can support your business now and as your digital requirements evolve in the future. Virtually limitless capacity means a new world of applications become practical solutions, from Office 365 to cloud computing platforms to help manage your HR functions. Gigabit connectivity also makes full backups quick and painless, protecting your critical data and ensuring your business can continue if the worst occurs and you lose business data through disaster, theft or equipment failure.

### Revolutionise the way your business communicates.

Ditch your land line for cheaper, smarter VoIP telephony and have your meetings face to face with HD video conferencing tools. With gigabit speed internet, lag free video conferencing will be the norm, helping to bring businesses together, even if they're on opposite sides of the world.

### Resilient, reliable, responsive

Business critical services can run smoothly over the state-of-the-art infrastructure operated by our partner CityFibre. This network is completely independent from incumbent infrastructure, enabling businesses to take a truly resilient connection and offers a Service Level Agreement to ensure access to crucial business data and systems at all times
